

Taking it  
on the road!

Hooking up my  
iCom-5100 Mobile Radio  
to Prius power.

KN6OJH, Nov. 2022

An extension power cable kit was conveniently found in a D8 shack misc. power cables bin.

This was exactly what I needed to connect the fused power cable that came with the radio to the battery.

I located a rubber gasket guiding a wire harness into the engine compartment...

and made a hole in the rubber through which to pass the radio power cable to connect reach the battery.

After only finding a fuse box and jumper terminals where the battery should be...

I took a dinner break and read the directions (Prius guide) and located the battery behind the right-rear wheel well.

The extension cable was then connected to the battery (and ground).
